EDUCATION

The University of Texas at San Antonio

Bachelor of Science in Computer Science

GPA: 3.6 • President's List

San Antonio, TX

May 2026

Relevant Coursework: Parallel Programming, Data Structures & Algorithms, Operating Systems, Software Engineering, Databases

TECHNICAL SKILLS

Languages: C#, Python, C, Lua, Go, Java

Frameworks & Engines: Unity, Godot, .NET

Tools & Platforms: Git, GitHub, Docker, Linux, SQL

Concepts: Parallel Programming, Networked Application Development, Functional Programming, AI Pathfinding, Real-Time Simulation Systems, Database Design, Web Scraping

EXPERIENCE

Ronin POS

Quality Assurance

San Antonio, TX

July 2023 – December 2024

- Executed manual and regression test cases on point-of-sale software across multiple builds to identify, reproduce, and document defects prior to release.
- Collaborated with developers to triage issues, verify bug fixes, and maintain clear test documentation across feature iterations.
- Performed end-to-end workflow testing across hardware configurations and transaction scenarios to ensure reliability for retail clients.

PROJECTS

Custom 2D Physics Engine & Procedural Graphics

C#, Unity

- Built a custom 2D physics simulation, including a mathematically simulated adjustable spring system for realistic deformable-body behavior.
- Developed a procedural graphics algorithm that dynamically generates visual compositions using parameterized, randomized rules.
- Applied advanced functional programming concepts (immutability, higher-order functions) to improve modularity, testability, and code reuse.

Multi-Platform Game Development Portfolio

C#, Lua, Unity, Godot

- Designed and developed multiple games in Unity and Godot, architecting core gameplay systems, state management, and rendering pipelines.
- Implemented intelligent AI navigation and pathfinding for responsive, context-aware NPC movement.
- Integrated third-party multiplayer APIs to support real-time, networked gameplay across multiple clients.

Academic Projects — Car Rental Database & Study App

SQL, Java

- Designed and implemented a relational database for a mock car rental company, including normalized schema, query optimization, and full CRUD operations.
- Built a student-facing study application as part of a software engineering course project, focusing on clean architecture and usability.

CERTIFICATIONS

Microsoft Intune & Azure • Microsoft Excel • Entrepreneurship and Small Business (ESB) • IRS VITA Certified Volunteer Tax Preparer (2019–2020)
